

Features

- Compliant with XENPAK MSA
- Up to 10GBd bi-directional data links
- Compliant with IEEE802.3ae Application
- XAUI Electrical Interface: 4 Lanes@3.125Gbit/s
- Hot Z-Pluggable
- SC Duplex Optical Receptacle
- MDIO, DOM(Digital Optics Monitoring) Support
- Temperature stabilized EML transmitter
- APD Photo-detector
- Class 1 laser product complies with EN 60825-1
- RoHS Compliant

Optical Receptacle Cleaning Recommendations :

All fiber stubs inside the receptacle portions were cleaned before shipment. In the event of contamination of the optical ports, the recommended cleaning process is the use of forced nitrogen. If contamination is thought to have remained, the optical ports can be cleaned using a NTT international Cletop® stick type and HFE7100 cleaning fluid. Before the mating of patch-cord, the fiber end should be cleaned up by using Cletop® cleaning cassette.

Cleaning of patch-cord

Cleaning of fiber stub

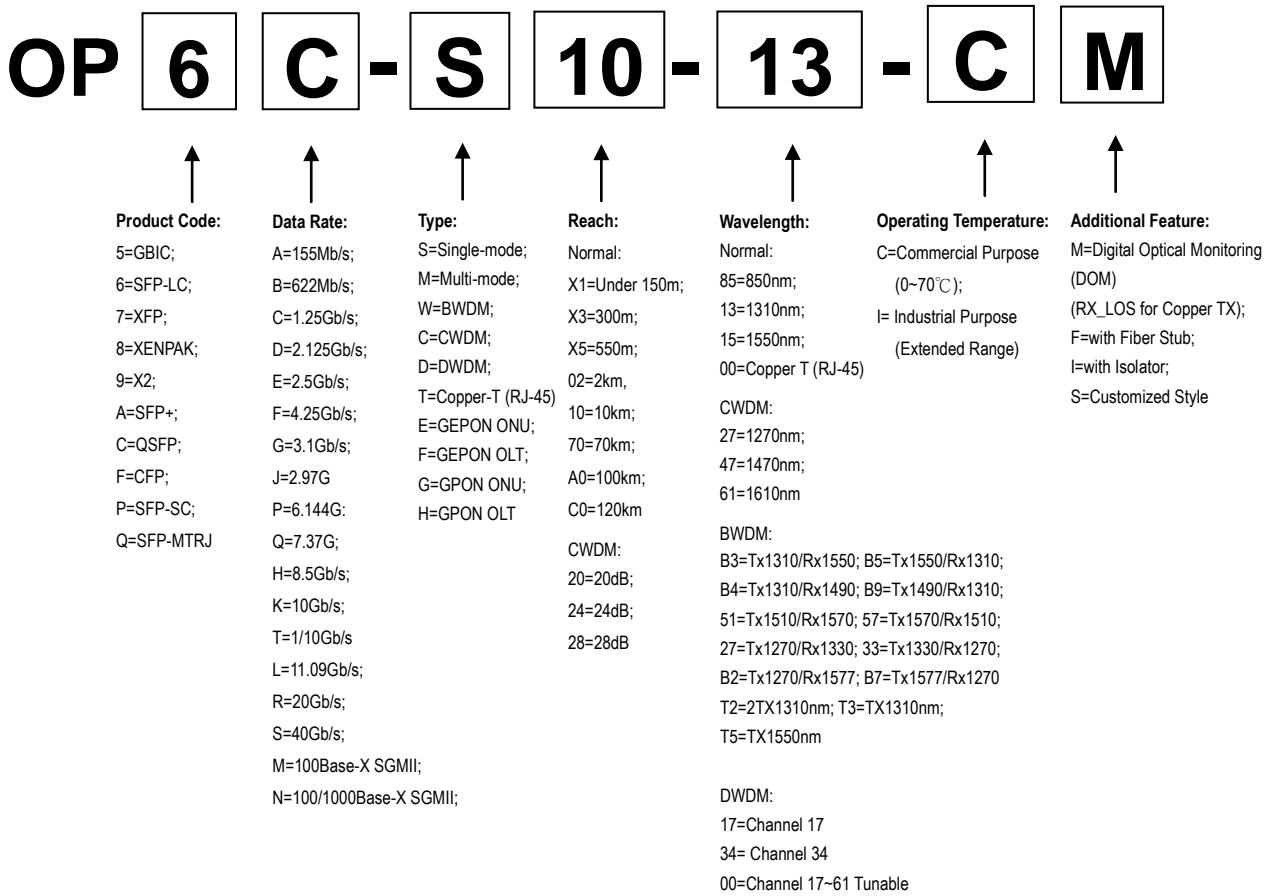

1. Insert
Ensure that stick is held straight when inserting into sleeve.
2. Load
Apply sufficient pressure (approx 600-700g) to ensure ferrule a little depressed in sleeve.
3. Rotate
Rotate stick clockwise 4-5 times, while ensuring direct contact with ferrule end-face is maintained.

*Notice: Number of possible wipes:
Maintenance (repair) ~1 use / piece
Equipment construction: 4 uses / piece (max.)*
